The studies were conducted in accordance with OECD guideline 406.

Ten test and five control animals were used in the study. The following test concentrations were administered in the main study.

Test Concentrations

Intradermal induction injection: (a) Freund's Complete Adjuvant (FCA) plus distilled water 1:1
(b) 10% w/v test article in arachis oil BP
(c) 10% w/v test article in 1:1 FCA plus distilled water
Topical induction: undiluted as supplied
Topical Challenge: undiluted as supplied and 75% v/v in arachis oil BP

In the induction phases, with control animals, the vehicle was substituted for the test article.

The undiluted test article induced positive skin reactions, in 50% of the test animals, when compared to controls
